

Firmware Update v1.10.11 – Chazy Control Pro

Release Date: 6 Jan 2026

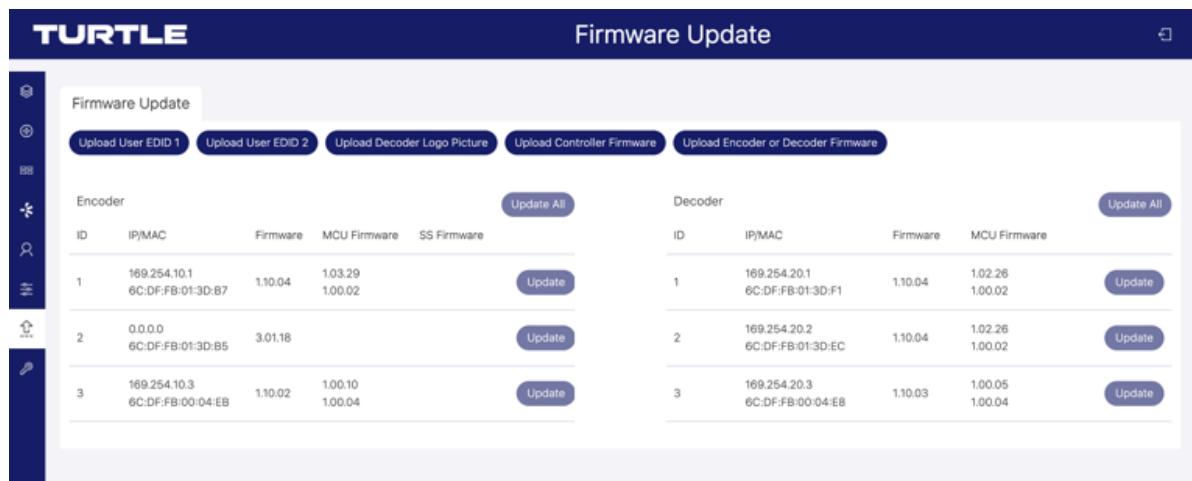

What's New

- Fixed an issue with Dante Presets not recalling all Dante subscriptions.
- Added support for RGB, YUV444 and YUV422 colour space conversion.
- Added additional EDID options.
- General stability improvements and minor backend optimizations.

Who Should Update

All users of the Chazy Control Pro are encouraged to install this update, especially those using Dante Controller as part of their workflow.

Installation

Upload Controller Firmware: Click the button to upload the Controller update firmware.

Upload Encoder or Decoder Firmware: Click the button to upload the Encoder/Decoder update firmware. After loading, you need to click “Update All” to update firmware for all Encoders/Decoders, or click “Update” to update firmware for a single Encoder/Decoder.
